Net Asset Value of EUR series:	1,121,245 EUR
Net Asset Value per unit:	3.928955 EUR

INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

Risk and Reward Profile:

MARKET SUMMARY:

Equity markets kept rising in November fuelled by further stimulus announcements in Europe and the tumbling energy prices. Oil prices nosedived by almost 20% in November on supply-demand imbalances as the OPEC did not change its production quota regardless of the mounting pressures on oil prices. Industrial metals also took a hit in sync with falling energy prices, while global equity markets were supported by the lower commodity price environment. European indices posted particularly strong performances throughout November -with the DAX leading the rally just a few points shy of its all-time high- as the ECB went on with announcing a further set of stimulus. Even though the S&P500 performed behind most of the European indices, it managed to hit all-time record highs in November amid the risk-on environment. Polish equity market closed the month in negative territory. PMI index improved thanks to the increase in output and in new orders, however, the industrial production growth is weak but still better than expected. Regarding individual names, Lotos performed the best supported by the improvement of refinery margins and due to proposed capital increase. The probable merger of utility companies and coal mining companies affected negatively PGE share price as coal producers are close to go bankrupt.
