Net Asset Value of HUF series:	30,416,199,105 HUF
Net Asset Value per unit:	2.536561 HUF

## INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## MARKET SUMMARY:

November has not been an uneventful month. The yield of developed markets strengthened, the US 10-year government bond yield decreased from 2,38% to 2,16% while the German 10-year government bonds reached a historic low 0,7% from 0,85%. This process also helped EM markets to gain momentum. Along with the above, ECB indicated further monetary easing signalling they are willing to do anything to fight the disinflationary environment. Even government bond purchases seem possible unlike months ago. This could be supported by the fact that the OPEC members do not intend to take back their production which lead to a further decrease in oil prices, thus the price of Brent oil fell below 70\$ which could increase disinflationary pressure on Europe. Equity markets stayed strong, the US had a strong reporting season, the DAX are testing new highs mainly amid monetary easing expectations. We gradually decreased equity longs in the fund, and also decreased HUF duration while allocating more to FX denominated EM bonds. We switched our European exposure to Japanese, while our Turkish bet performed well.

## ASSET ALLOCATION OF THE FUND ON 11/30/2014
