Net Asset Value of R series:	3,984,779,702 HUF
Net Asset Value per unit:	1.148105 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY:

Equities remained volatile throughout December as markets sold off on tumbling commodity prices and emerging currency concerns followed by a bounce back in the second half of the month. With no quick remedy for the supply glut oil prices remained under pressure regardless of the depressed price levels. China once again staged a huge rally with the Shanghai Composite appreciating by 20% in December driven by momentum trade and the benign effects of the lower commodity price environment. European stimulus expectations and the unfolding Greek political turmoil drove the EUR to multi-year lows against the USD, while US equity markets managed to outperform European indices.

The fund bore losses on foreign currency denominated Hungarian government bonds but it could successfully offset the losses with positions besides USD and certain equity positions.
