Total Net Asset Value of the whole Fund:	872,929 EUR
Net Asset Value of EUR series:	872,929 EUR
Net Asset Value per unit:	0.989635 EUR

## INVESTMENT POLICY OF THE FUND:

The fund aims to grow the euro-based savings invested in it through returns that exceed the interest rates attainable on bank deposits. The fund is a money-market fund with a broad investment policy, issued in euro, which combines the fund management company's emerging-markets expertise with the safety of classic money-market funds. The fund may invest in the investment instruments permitted by law, with special regard to the money and bond markets. The fund may not hold shares. The fund's investment focus is on short-term government and corporate euro bonds. In the interest of achieving a stable traded price and low volatility we keep the fund's interest risk low; the fund's average modified duration may not exceed one year. Besides traditional money-market instruments (treasury bills, government securities), the fund aims to ensure a higher yield than that of traditional money-market instruments by purchasing mortgage and corporate bonds, and by taking advantage of the premiums that these offer. When selecting these instruments the fund sets strict quality requirements, and may not hold securities that are below investment-grade or do not have a credit rating, except for bonds issued or guaranteed by the State of Hungary. The fund can only open long positions, and is not permitted to open uncovered short positions. It may only open forward contracts for the purposes of hedging or portfolio optimisation. The fund may not use leverage. The fund aims to choose as freely as possible among the opportunities available in the domestic and international capital markets, exercising the caution that is consistent with the fund's investment strategy. The fund records its assets in euro, and endeavours to fully hedge its exposures in other currencies.

Annualized standard deviation of the fund's weekly yields:	0.17 %
Annualized standard deviation of the benchmark's weekly yields:	0.02 %

## MARKET SUMMARY:

December has brought no change in terms of the downward sliding of the oil prices. The prices of the energy source have fallen by a remarkable 25%. As the sanctioned-hit, oil-exporter Russia is facing huge economic challenges (expected fall in real GDP around 4,5% in 2015), its currency deteriorated significantly in the first half of December. In order to maintain the stability of the Rubel, the Central Bank of Russia increased its key policy rate to 17% by a 650 basispoints increase, which was just enough to trigger a huge havoc after a short lived relief on the Rubel's market. The panic has quickly shifted to other capital markets as well, and the supposedly calm weeks before Christmas have quickly turned into nightmare on the markets. The sentiment had its affect on emerging market hard currency bonds. The USD denominated EM sovereign bonds declined by -2,87% in December, on a sub-region level Europe was the worst performer, while Asia remained quite resilient, the performances were -4,3% and -0,34% respectively. Meanwhile safe haven buying pulled down the bond yields of core markets.

## ASSET ALLOCATION OF THE FUND ON 12/31/2014
