Net Asset Value of P series:	25,970,277 PLN
Net Asset Value per unit:	1.075419 PLN

## INVESTMENT POLICY OF THE FUND:

The aim of the investment fund is to give investors access to the Polish bond market and to function as a relatively stable, medium-risk investment already medium term, offering our customers stable real returns without the need to tie up their savings for a fixed period. The fund primarily invests into Zloty denominated Polish government bonds but the portfolio manager has some room to use other fixed income investments. We aim to maximise returns with the given risk level. Our investment decisions are based on fundamental research extended by technical research while we also take into account global market sentiment. Expected shifts in the yield curve based on our macro expectations are at the core of our investment process. Risk/return characteristics are also considered when we select suitable and safe investments. We aim to totally hedge any currency risk in the fund.

Risk and Reward Profile:

## MARKET SUMMARY:

The NBP kept rates on hold in April, as widely expected. Main development of the month was the sell-off in fixed income markets led by German government bonds. Although inflation seems to be bottoming out, with increasing oil prices and euro zone can do better in terms of economic activity than previously expected, the momentum and pace of sell-off seems to be irrational, too extreme. Sell-off in core rates resulted in skyrocketing EM bond yields as well. Poland government bonds were not an exception: significant increase in yields coupled with a steepening of the yield curve in April.
