MARKET SUMMARY:

After the consolidation at the end of January, markets were selling off in the first two weeks of February but with waning selling pressure and with increasing buying power. After having reached the highest levels since September, selling pressure eased and option implied vols decreased indicating potential medium-term consolidation. Oil bottomed around USD 26 with implied vols at historic highs, and closed with improving momentum. Oil-related fx crosses were performing much better than the underlying and most of them closed way stronger than end-of-January levels.

The fund was trading very actively profiting from the selloff early in the month. Most short positions were closed before markets erased their losses making the fund up for the month.
